

Traditional MVC

Traditional MVC

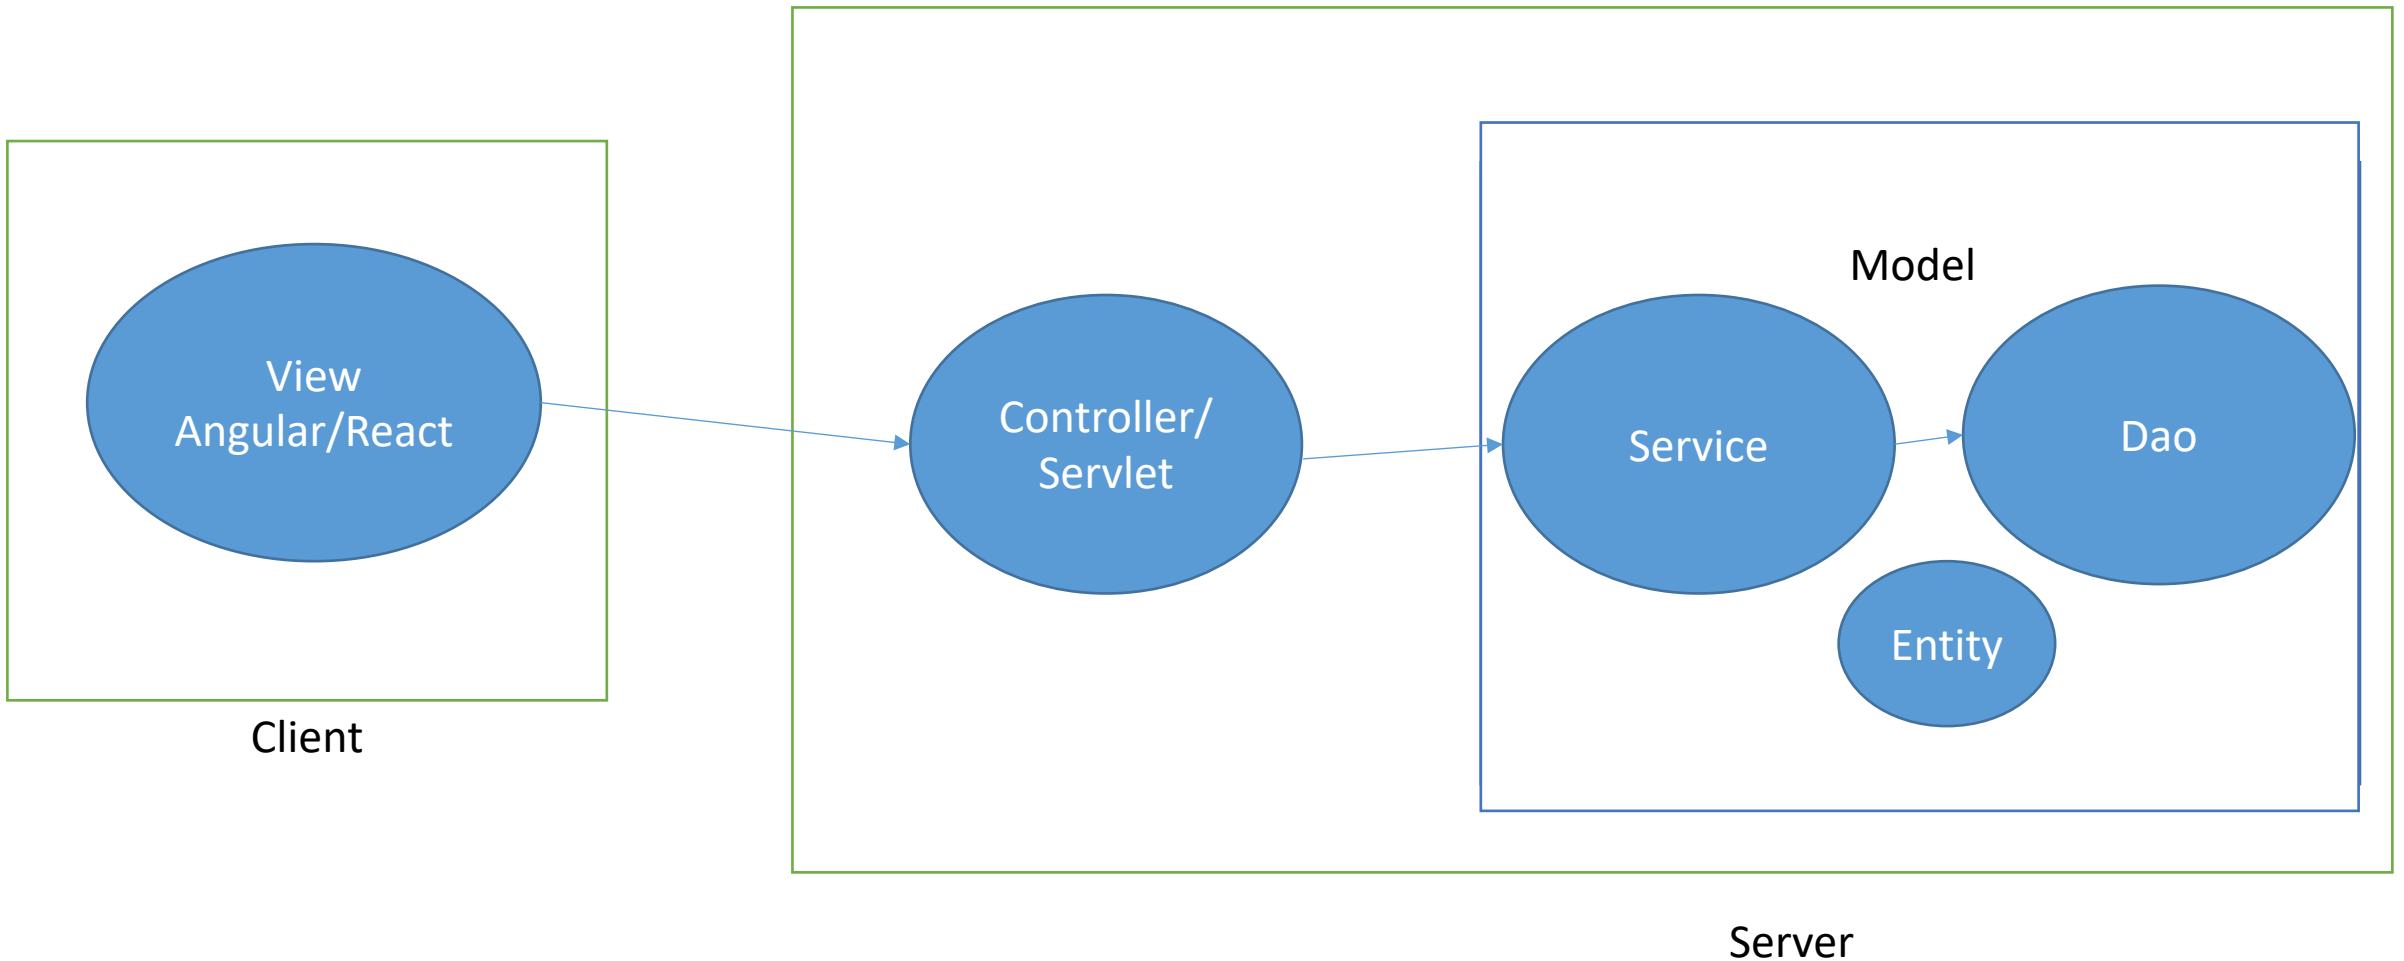

The problem is in Traditional MVC(20yrs old approx.) architecture, everything happens on the Server

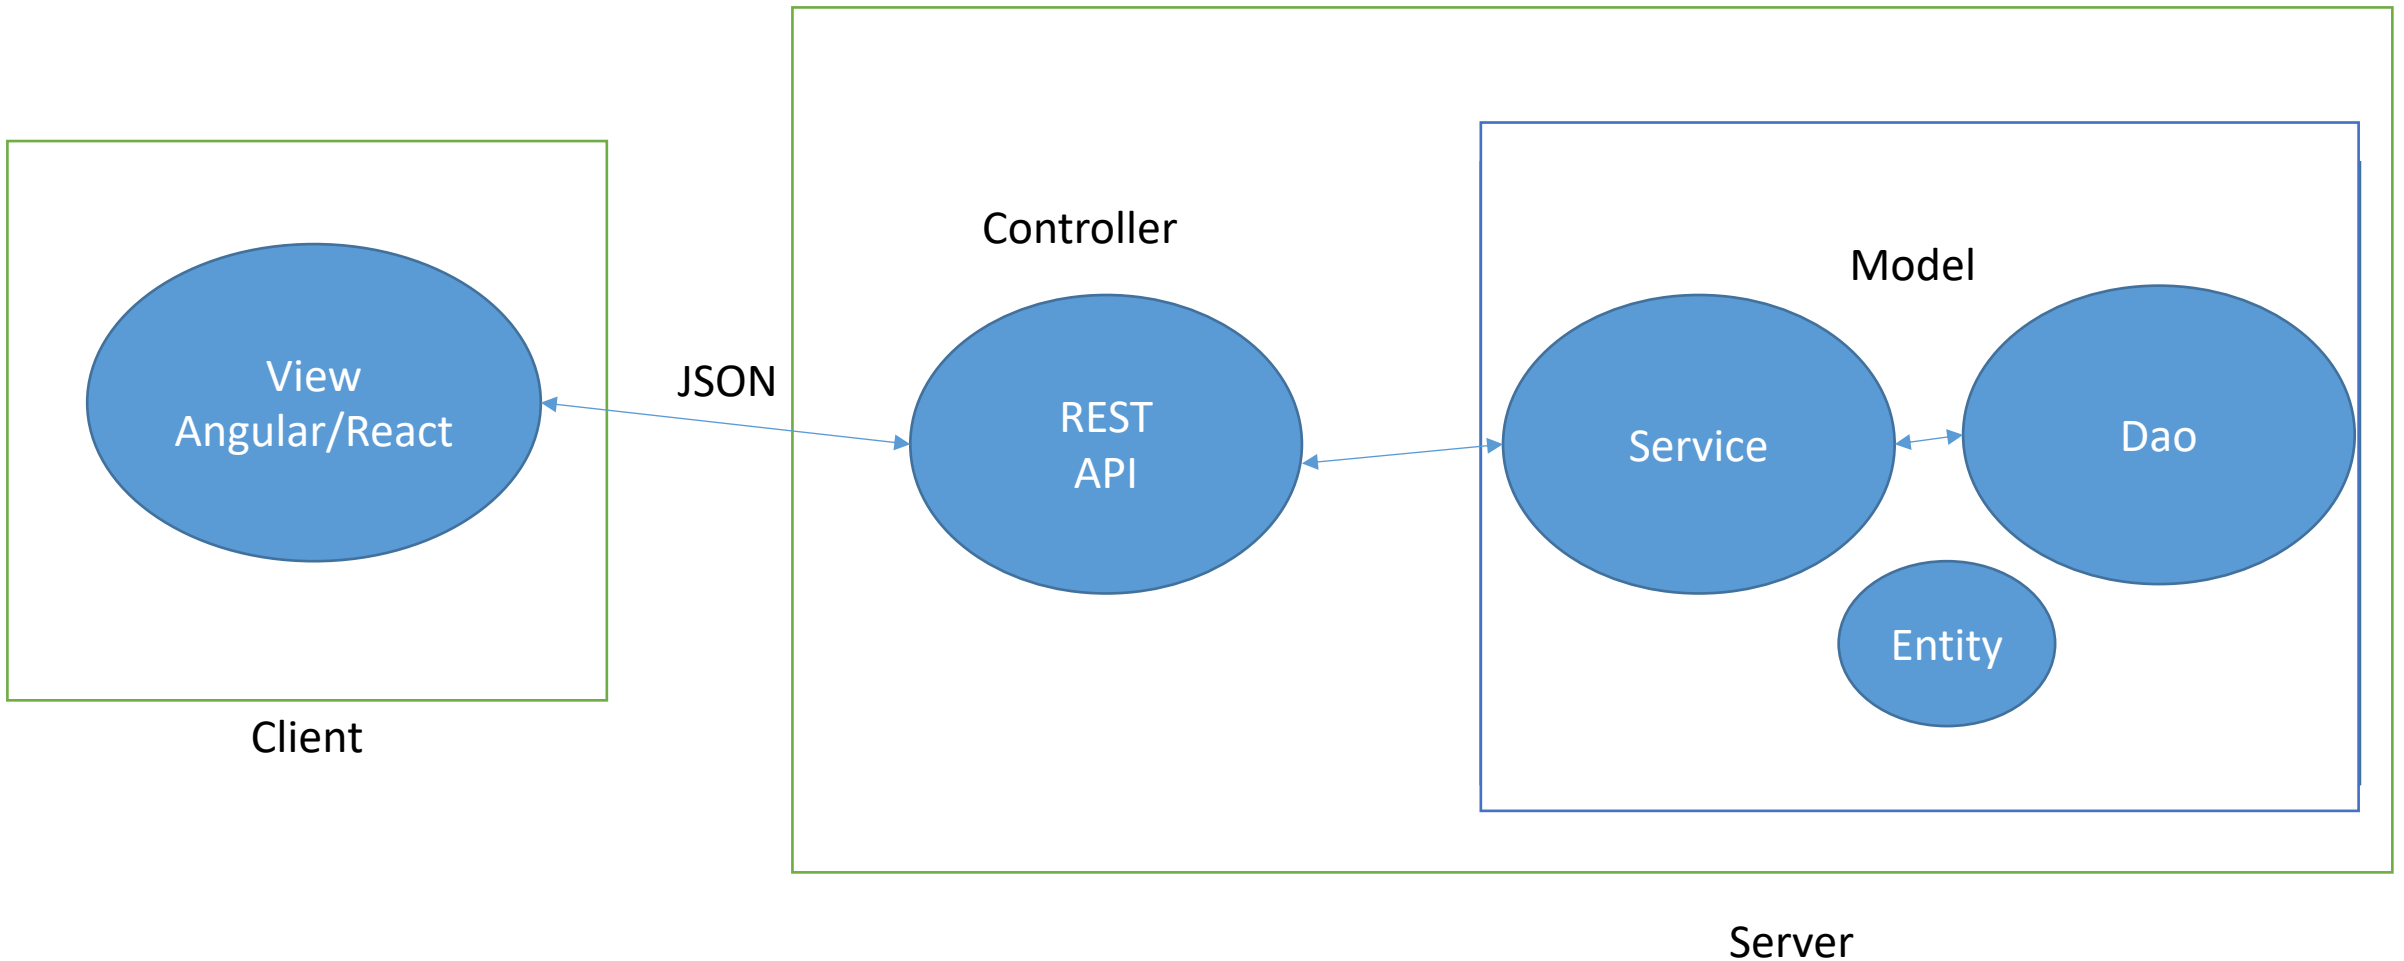

Modern MVC:

Views are managed using JavaScript based frameworks

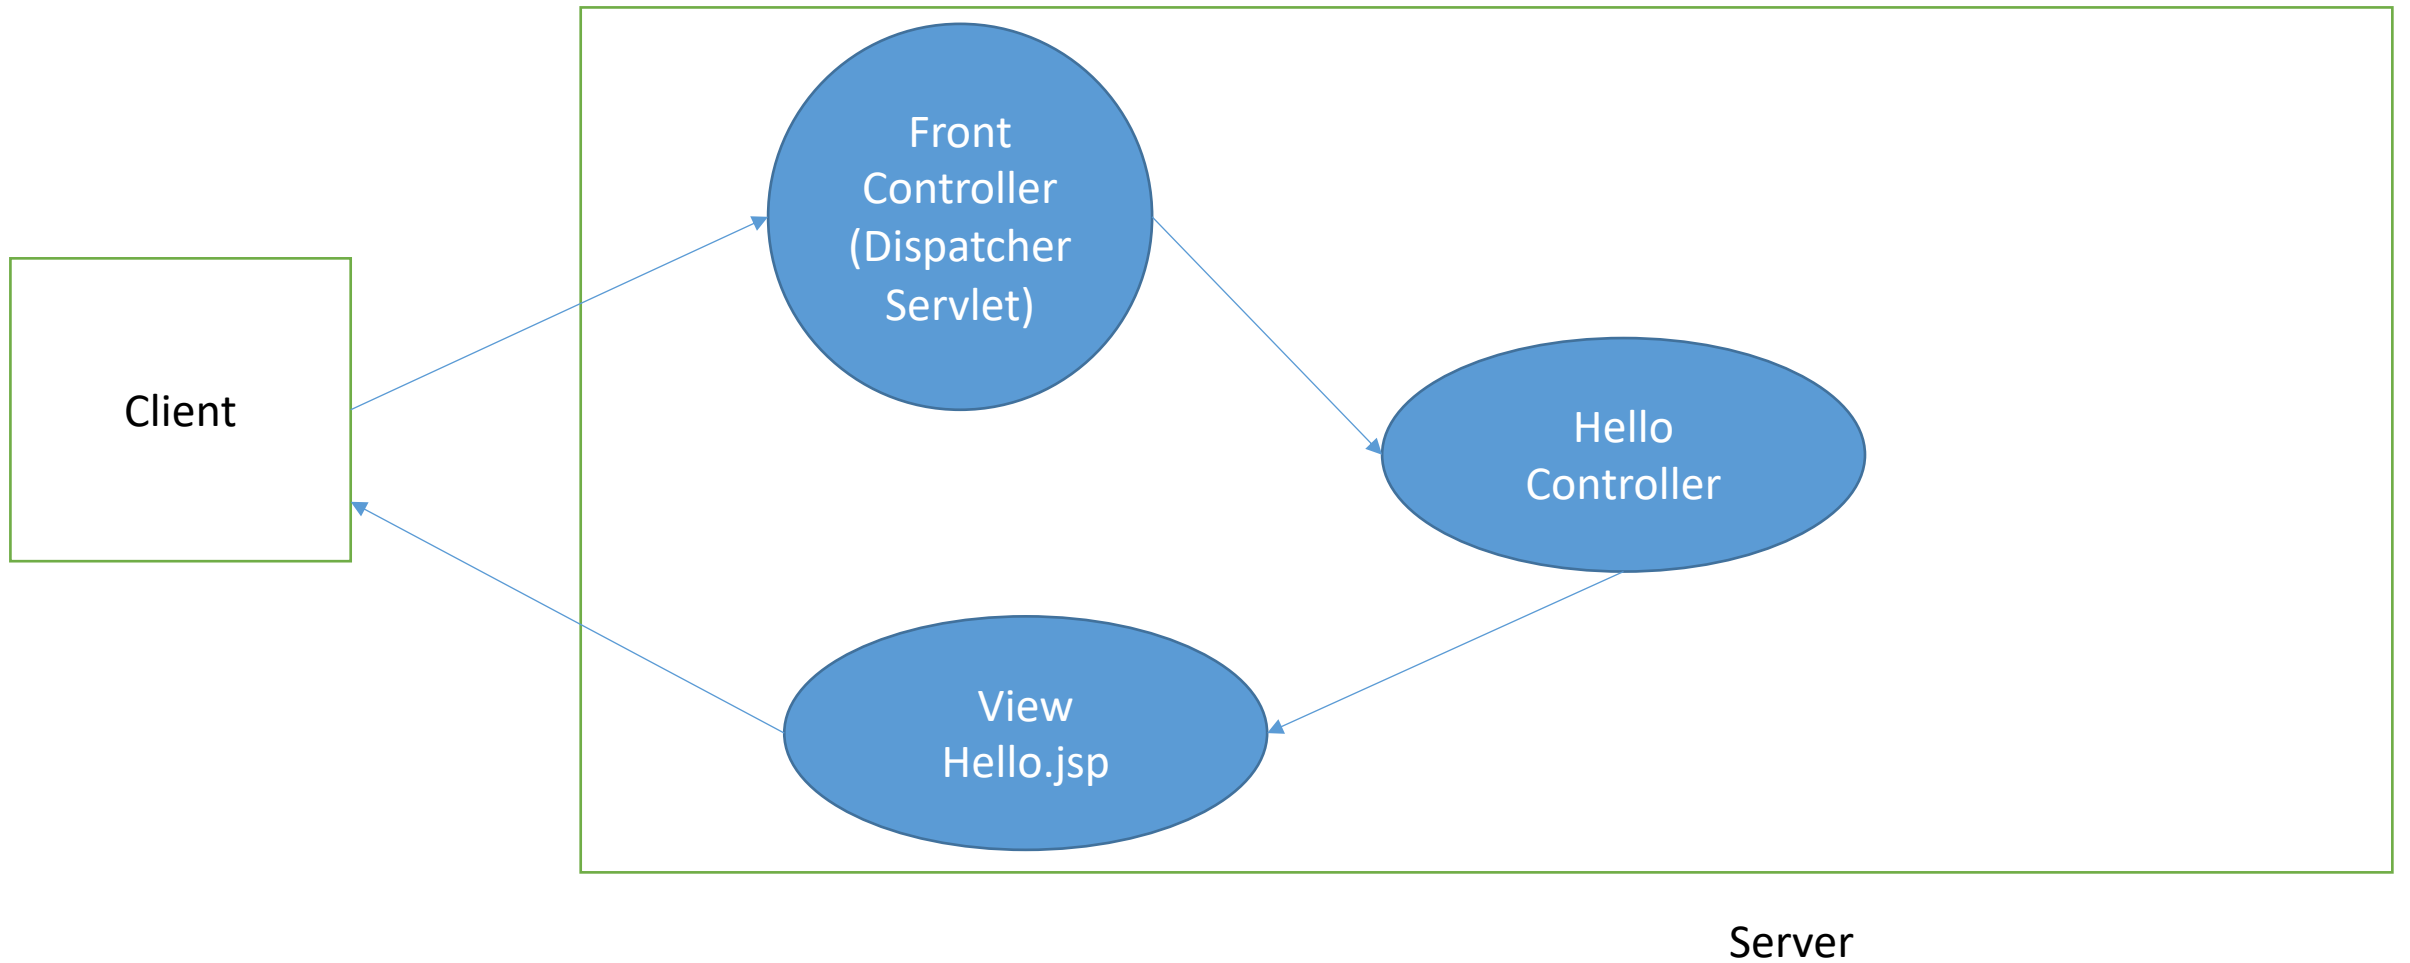

Modern MVC:

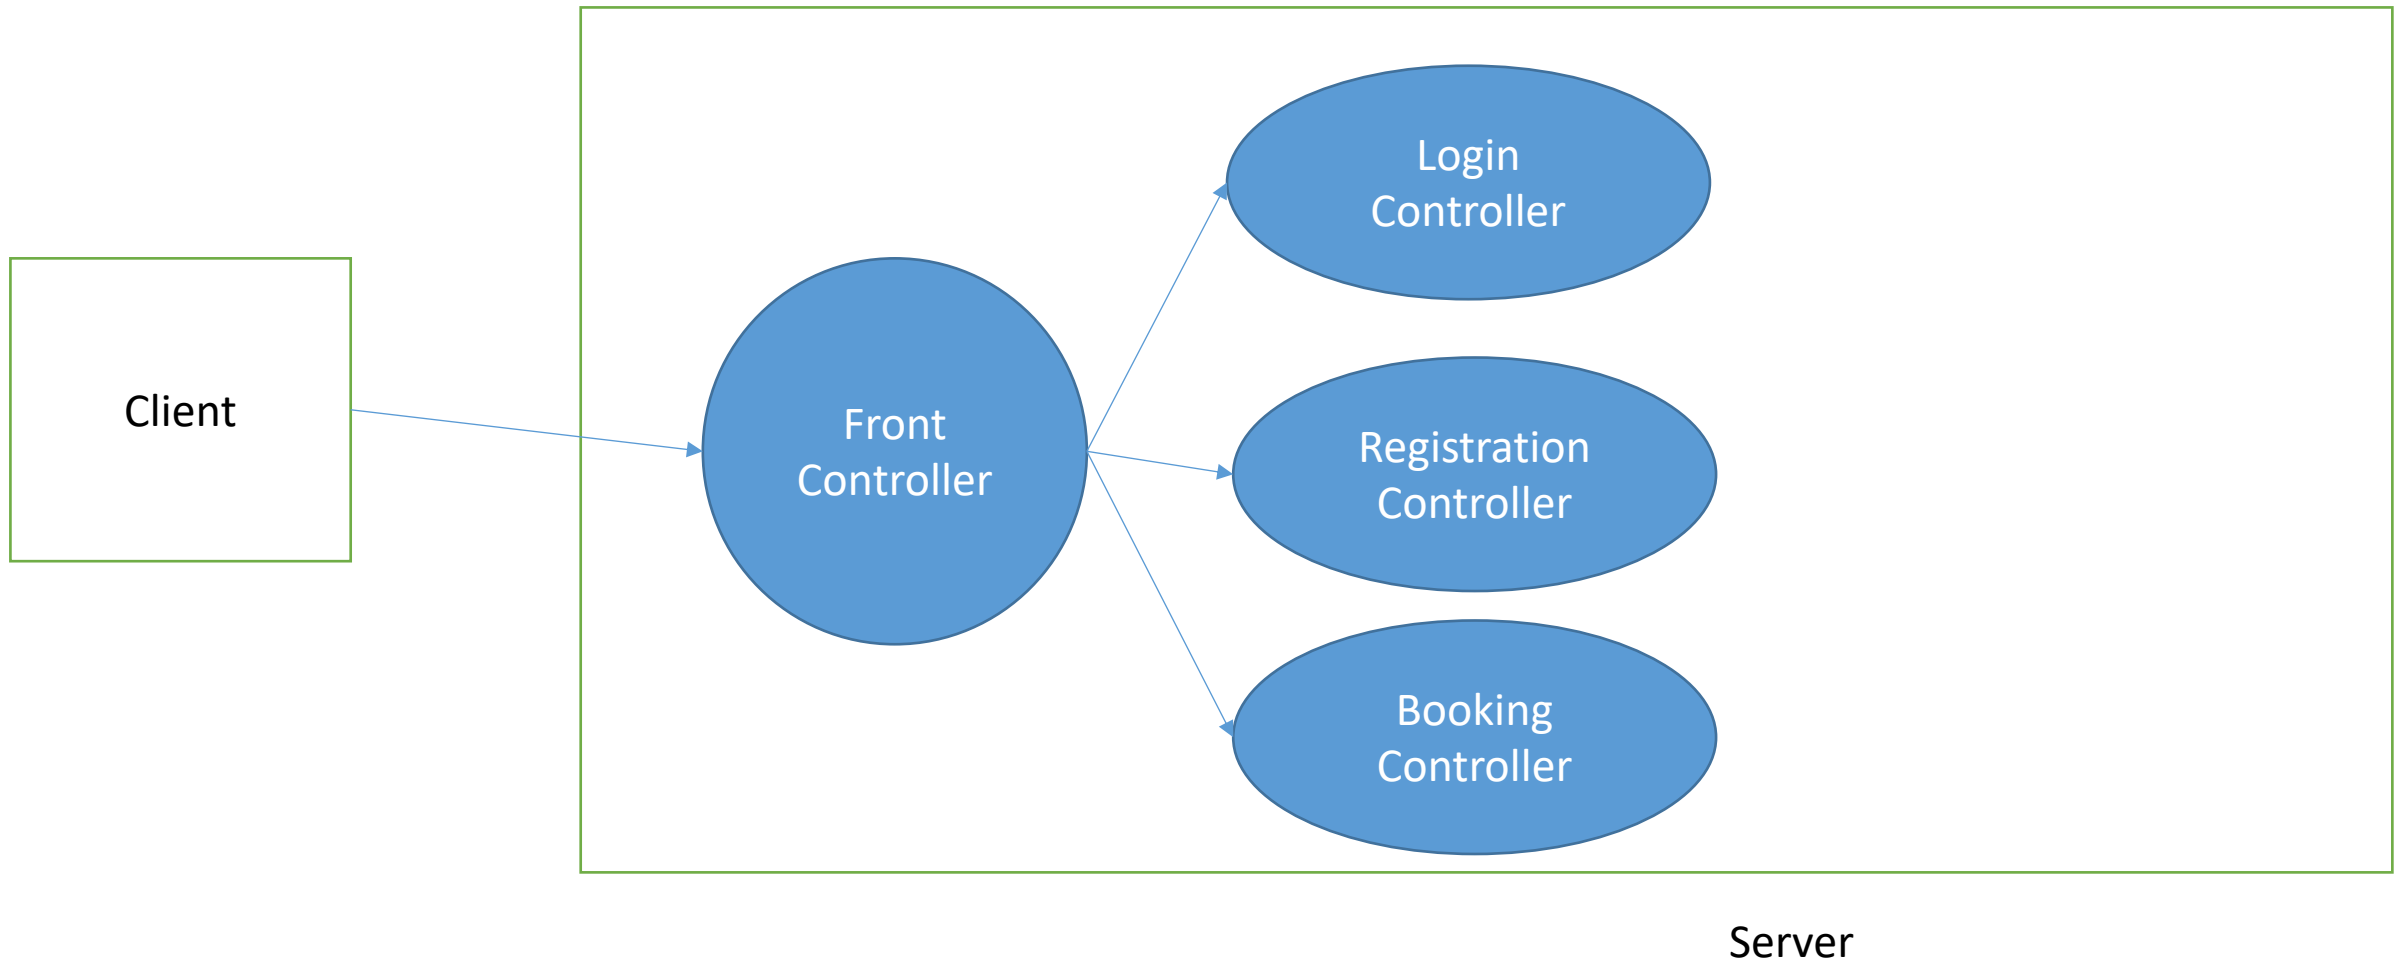

Views are managed using JavaScript based frameworks

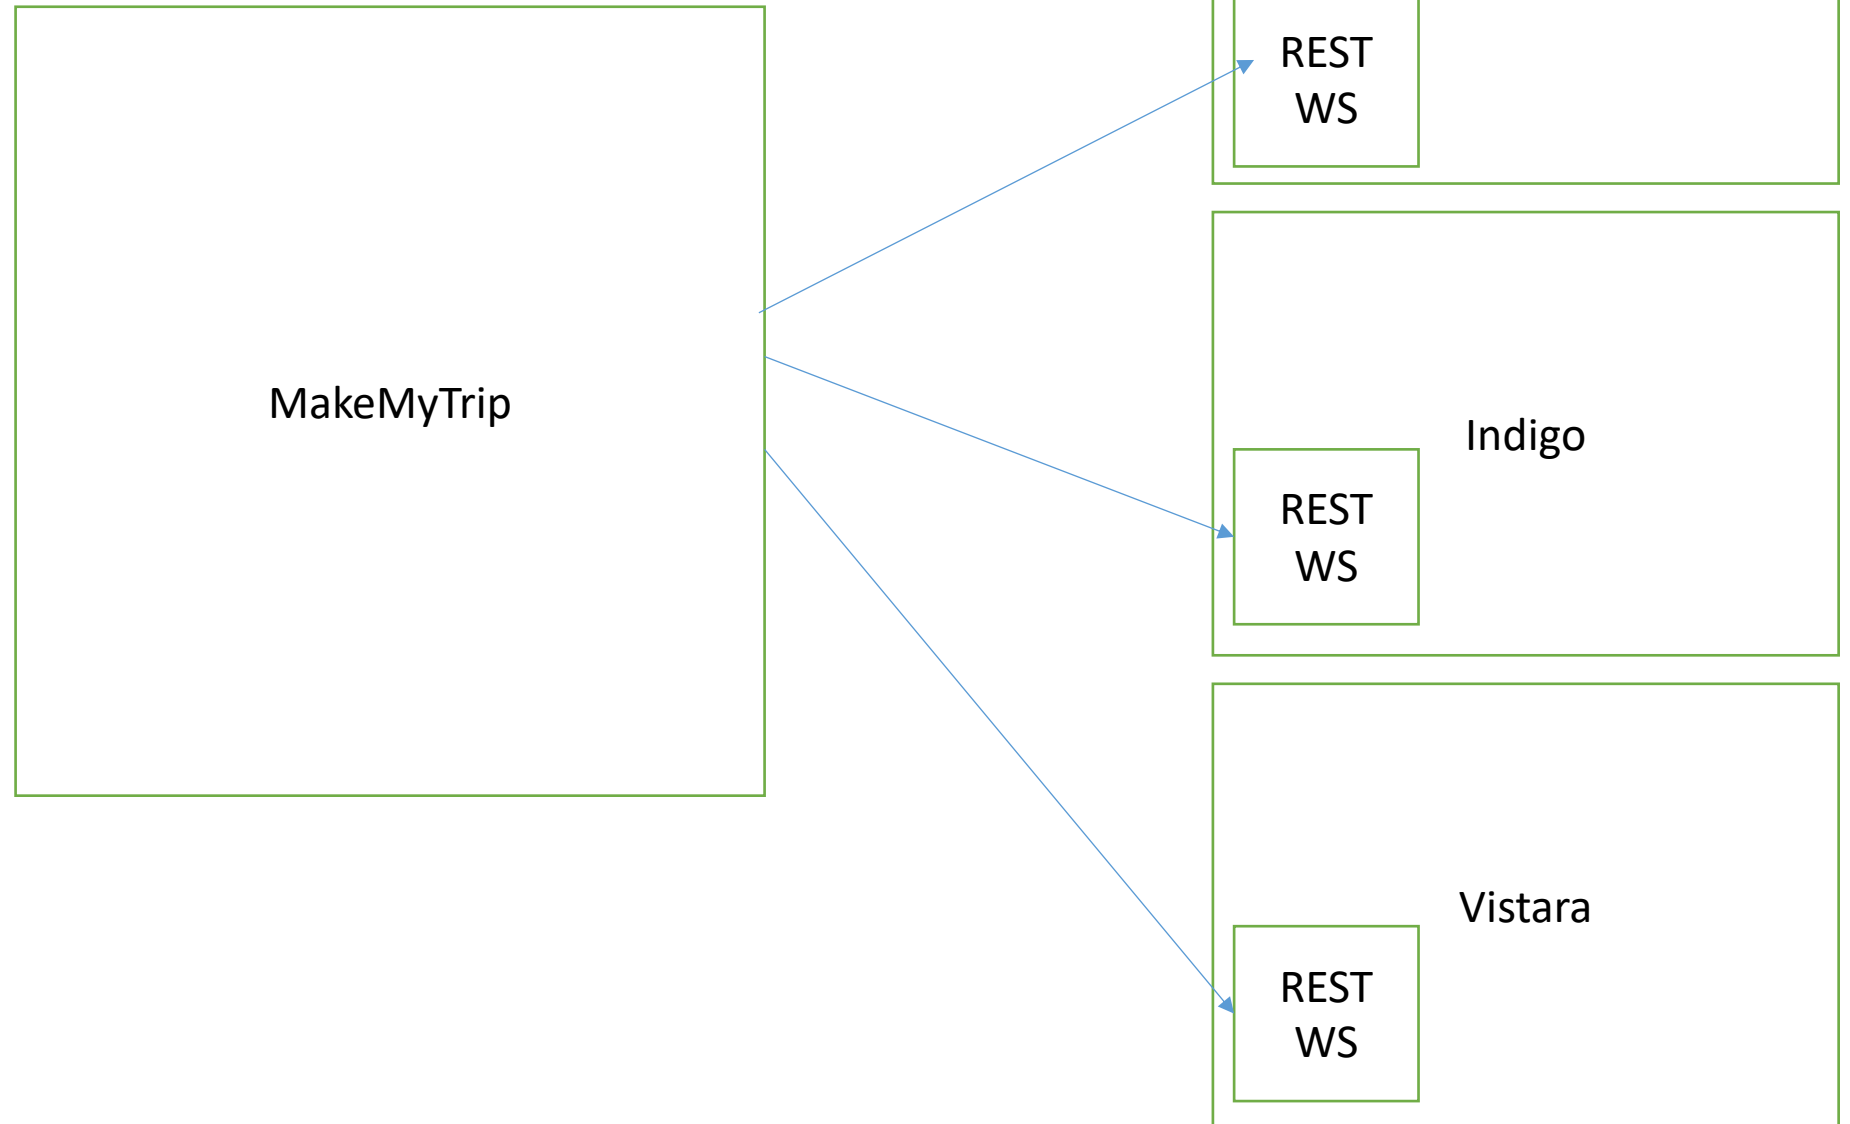

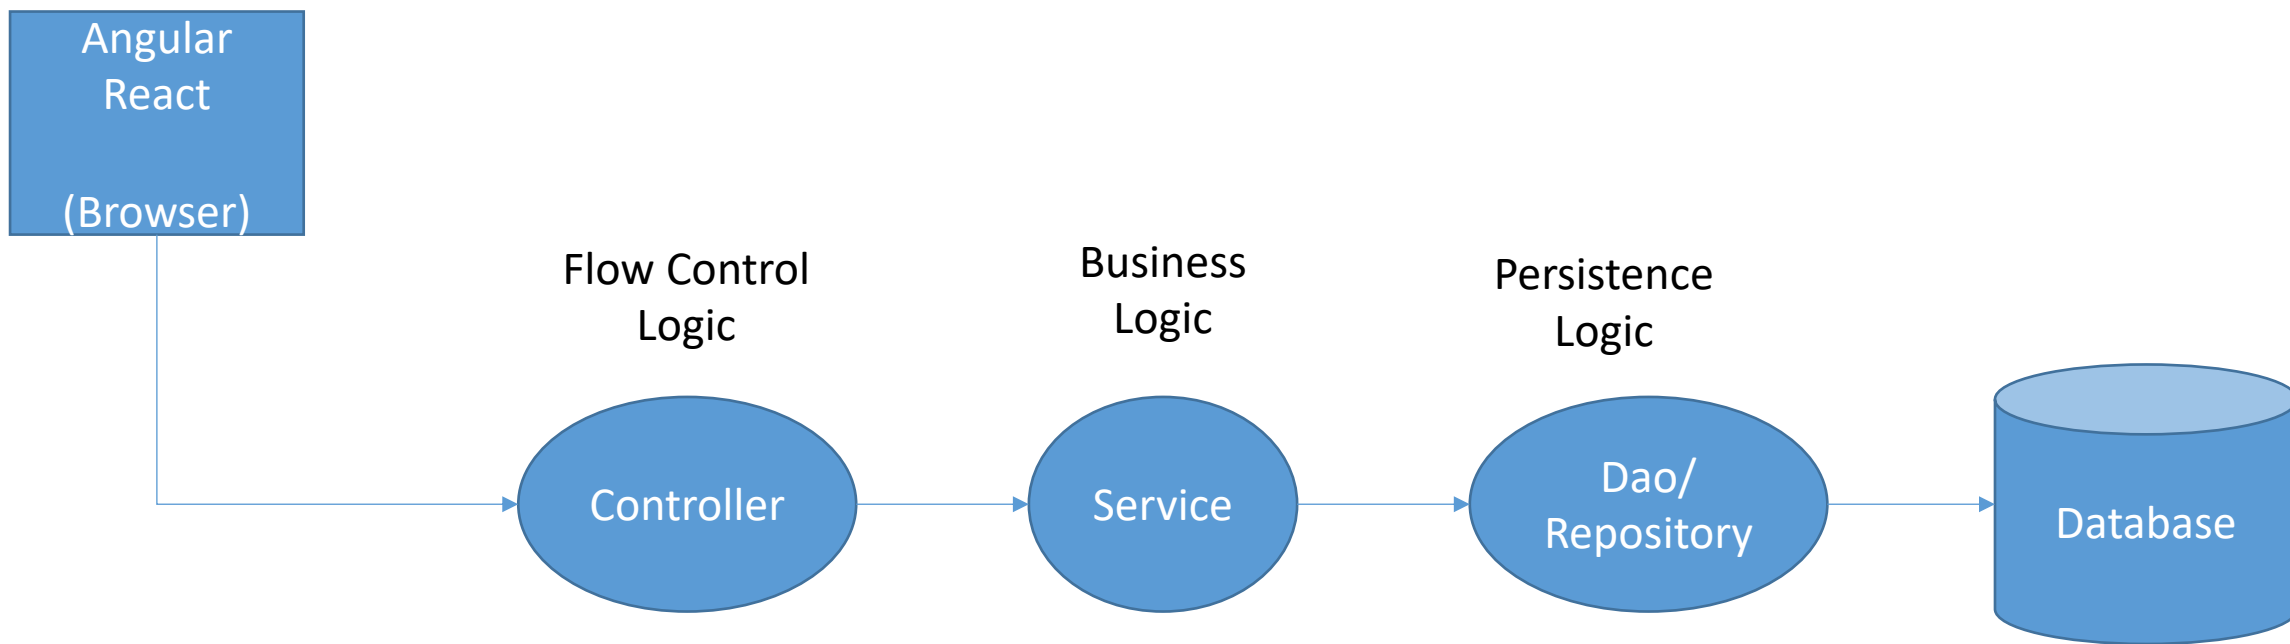

Spring MVC setup

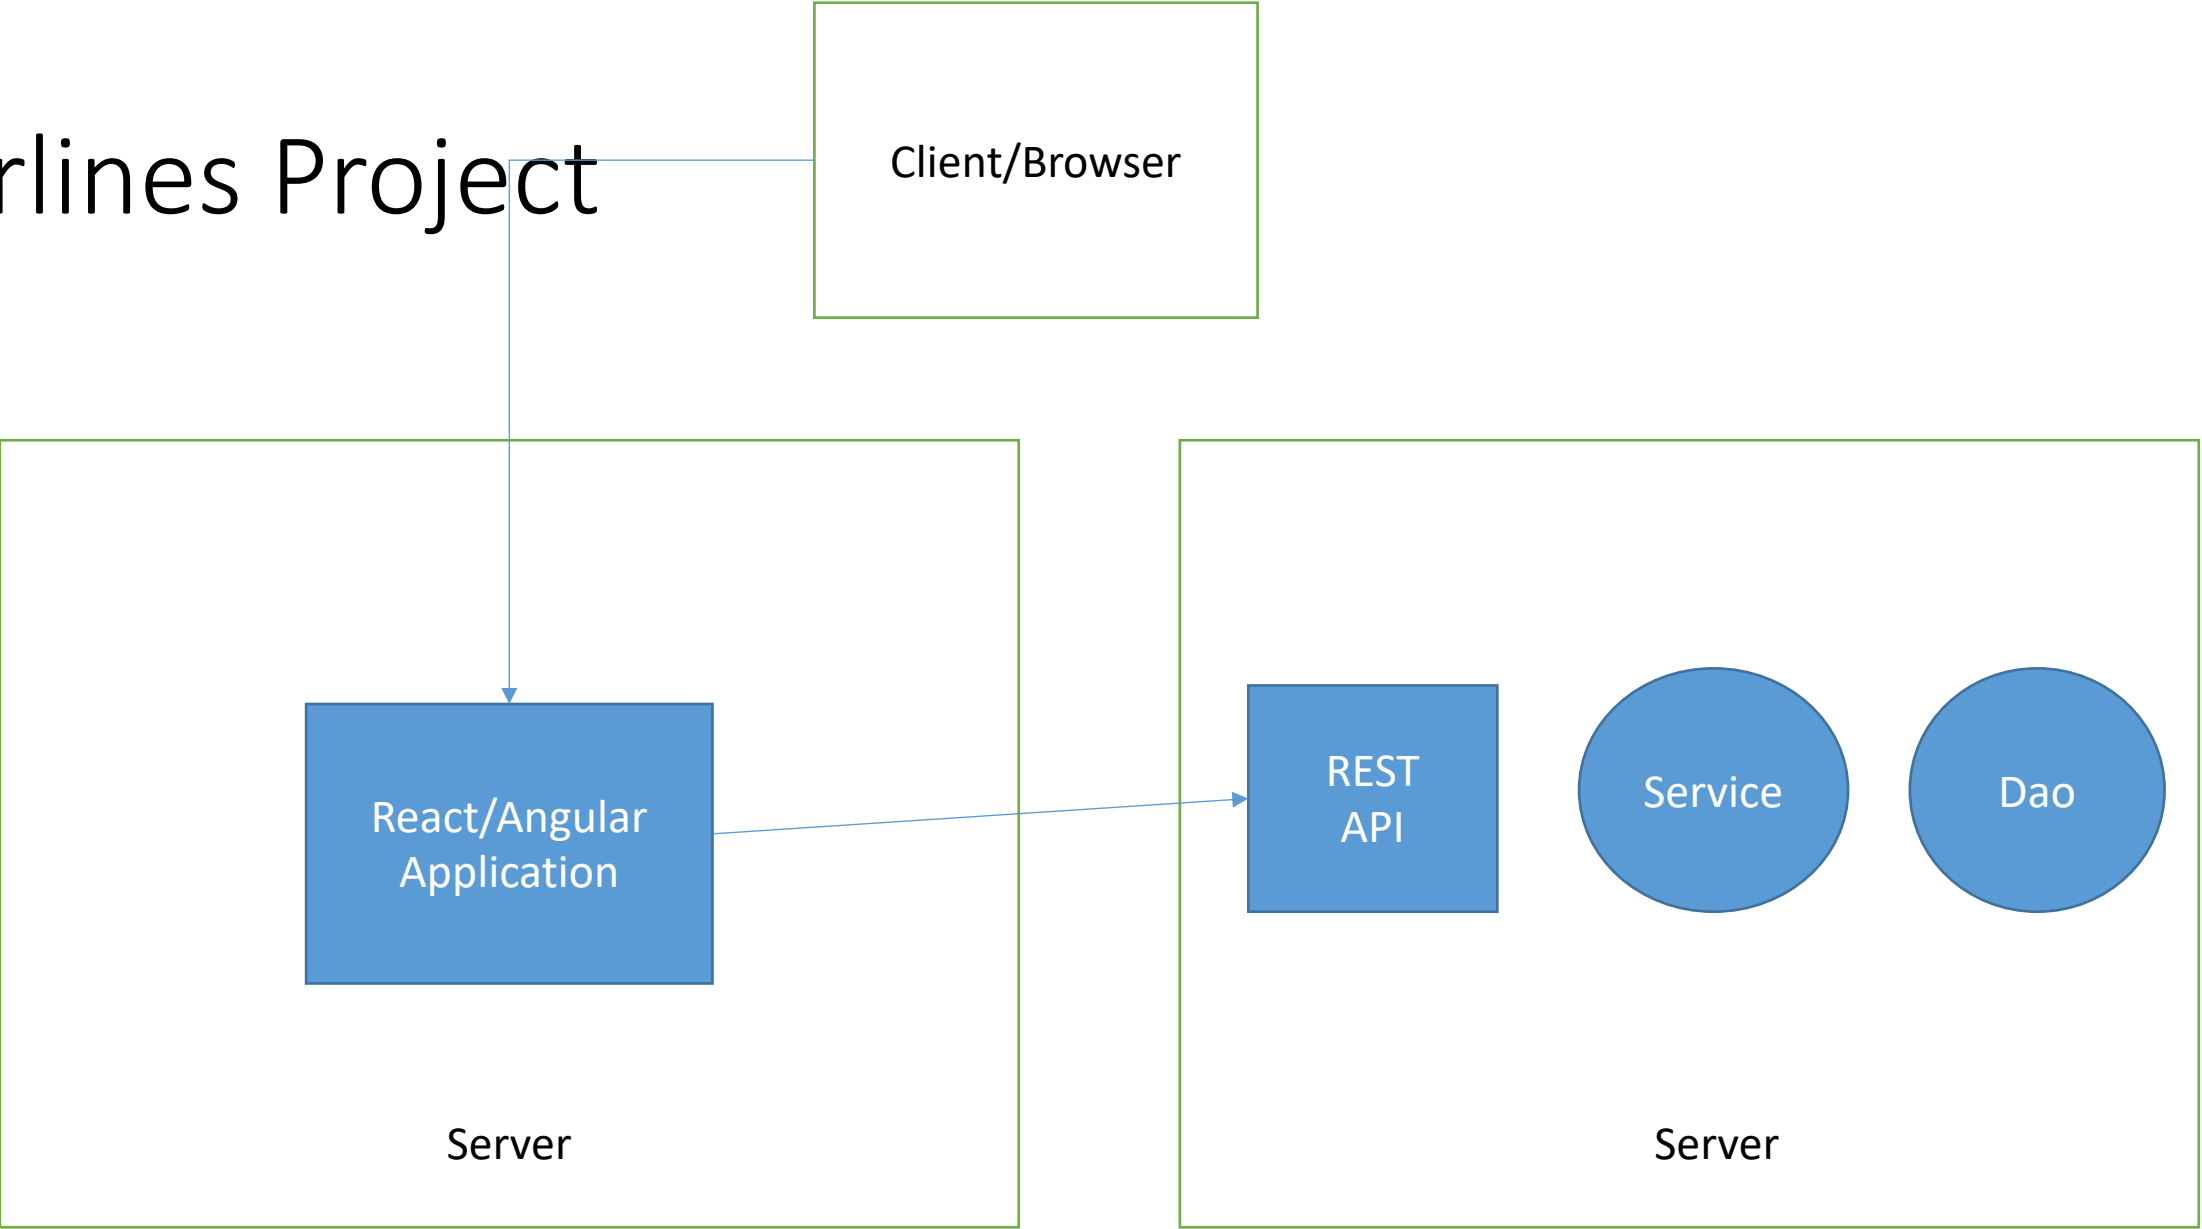

Spring MVC setup

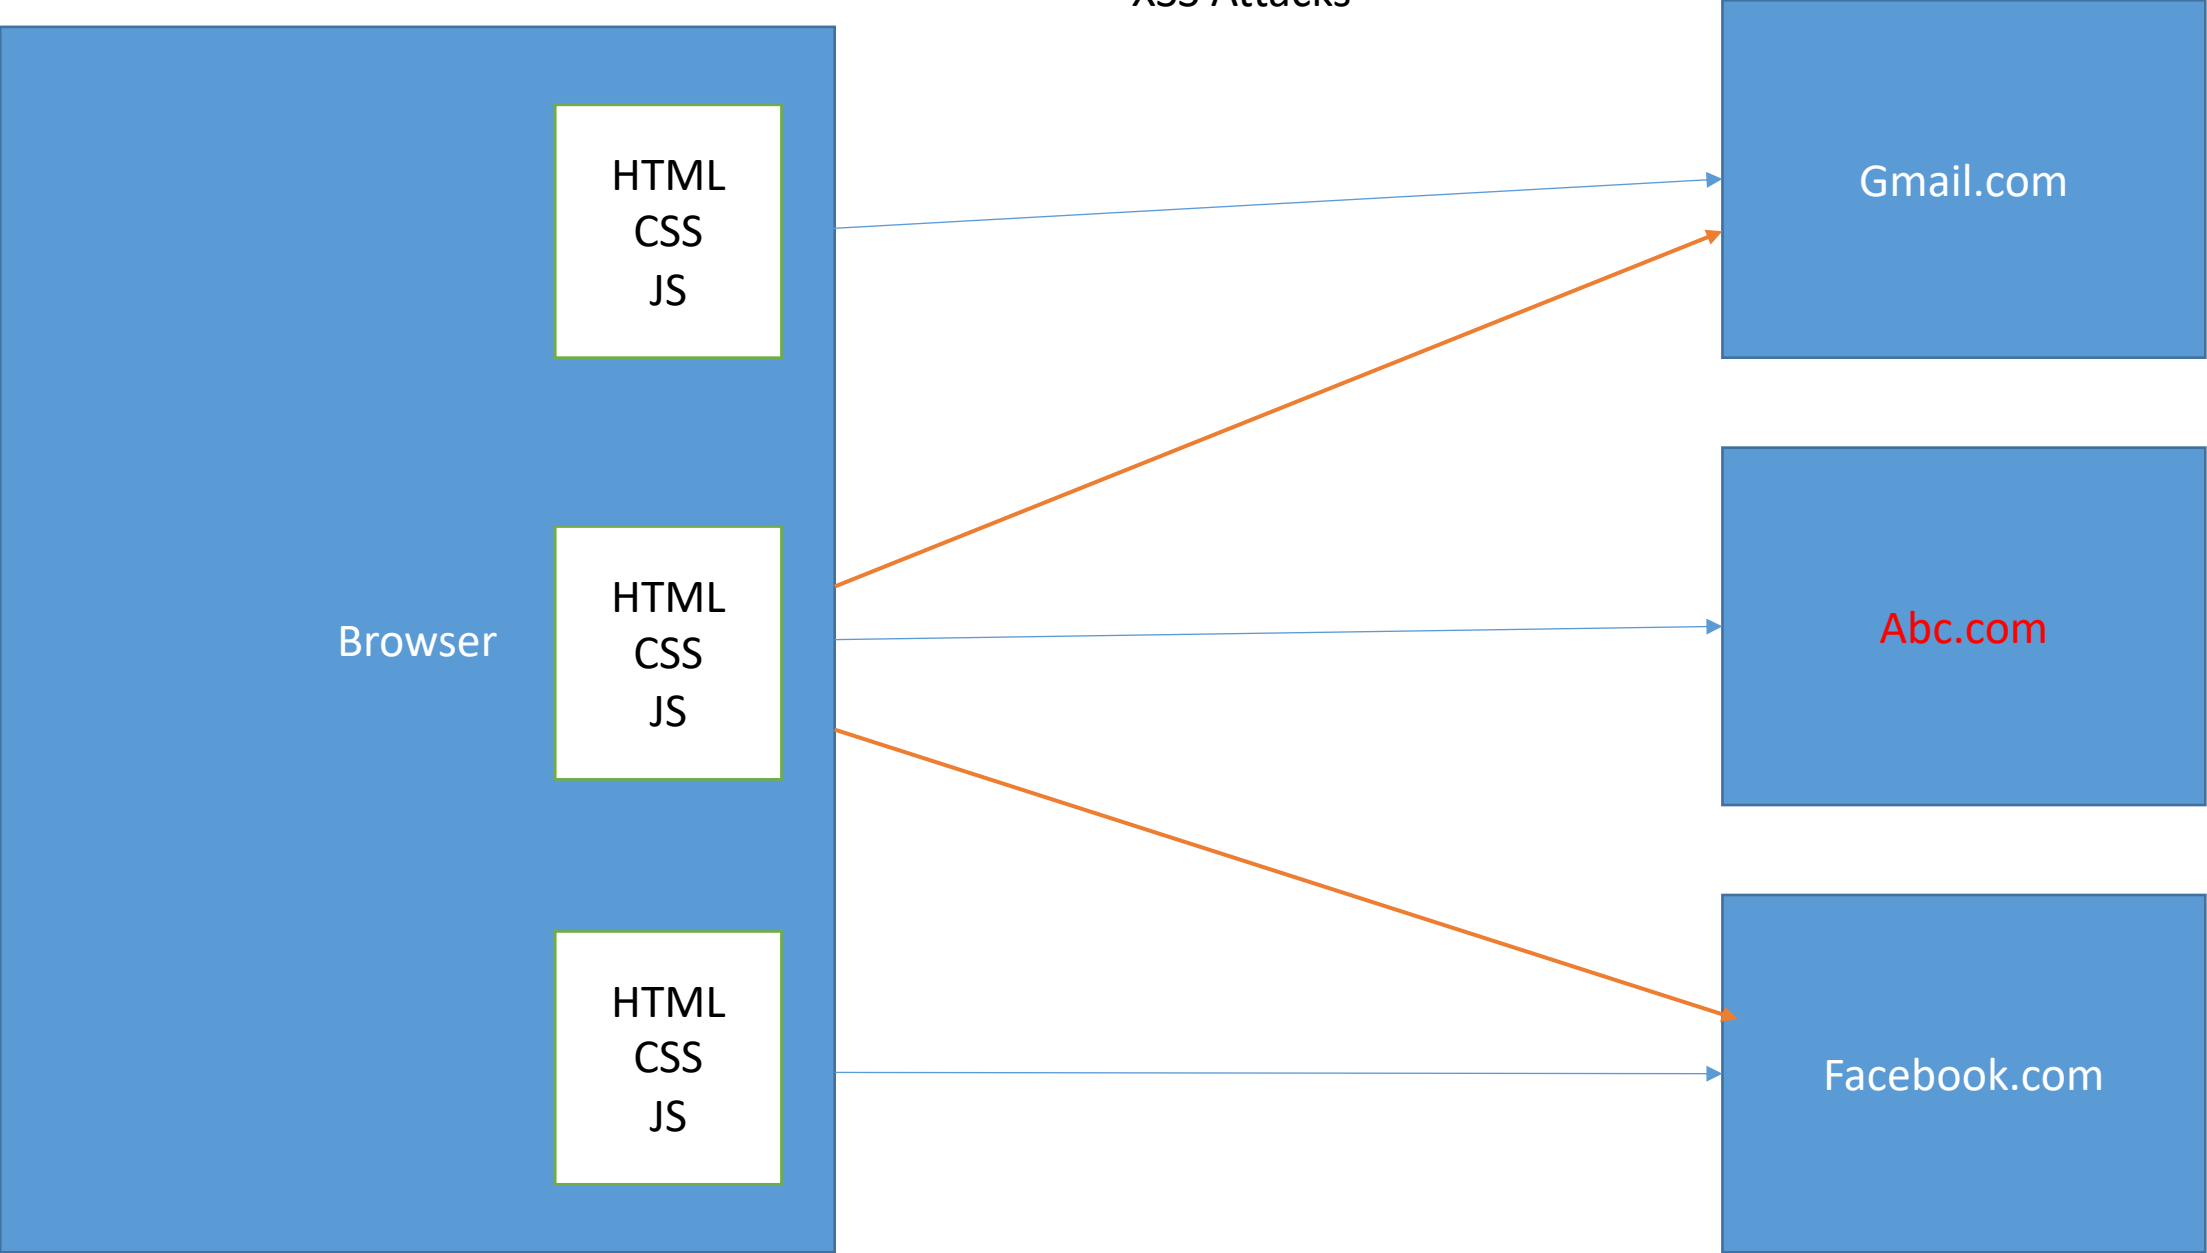

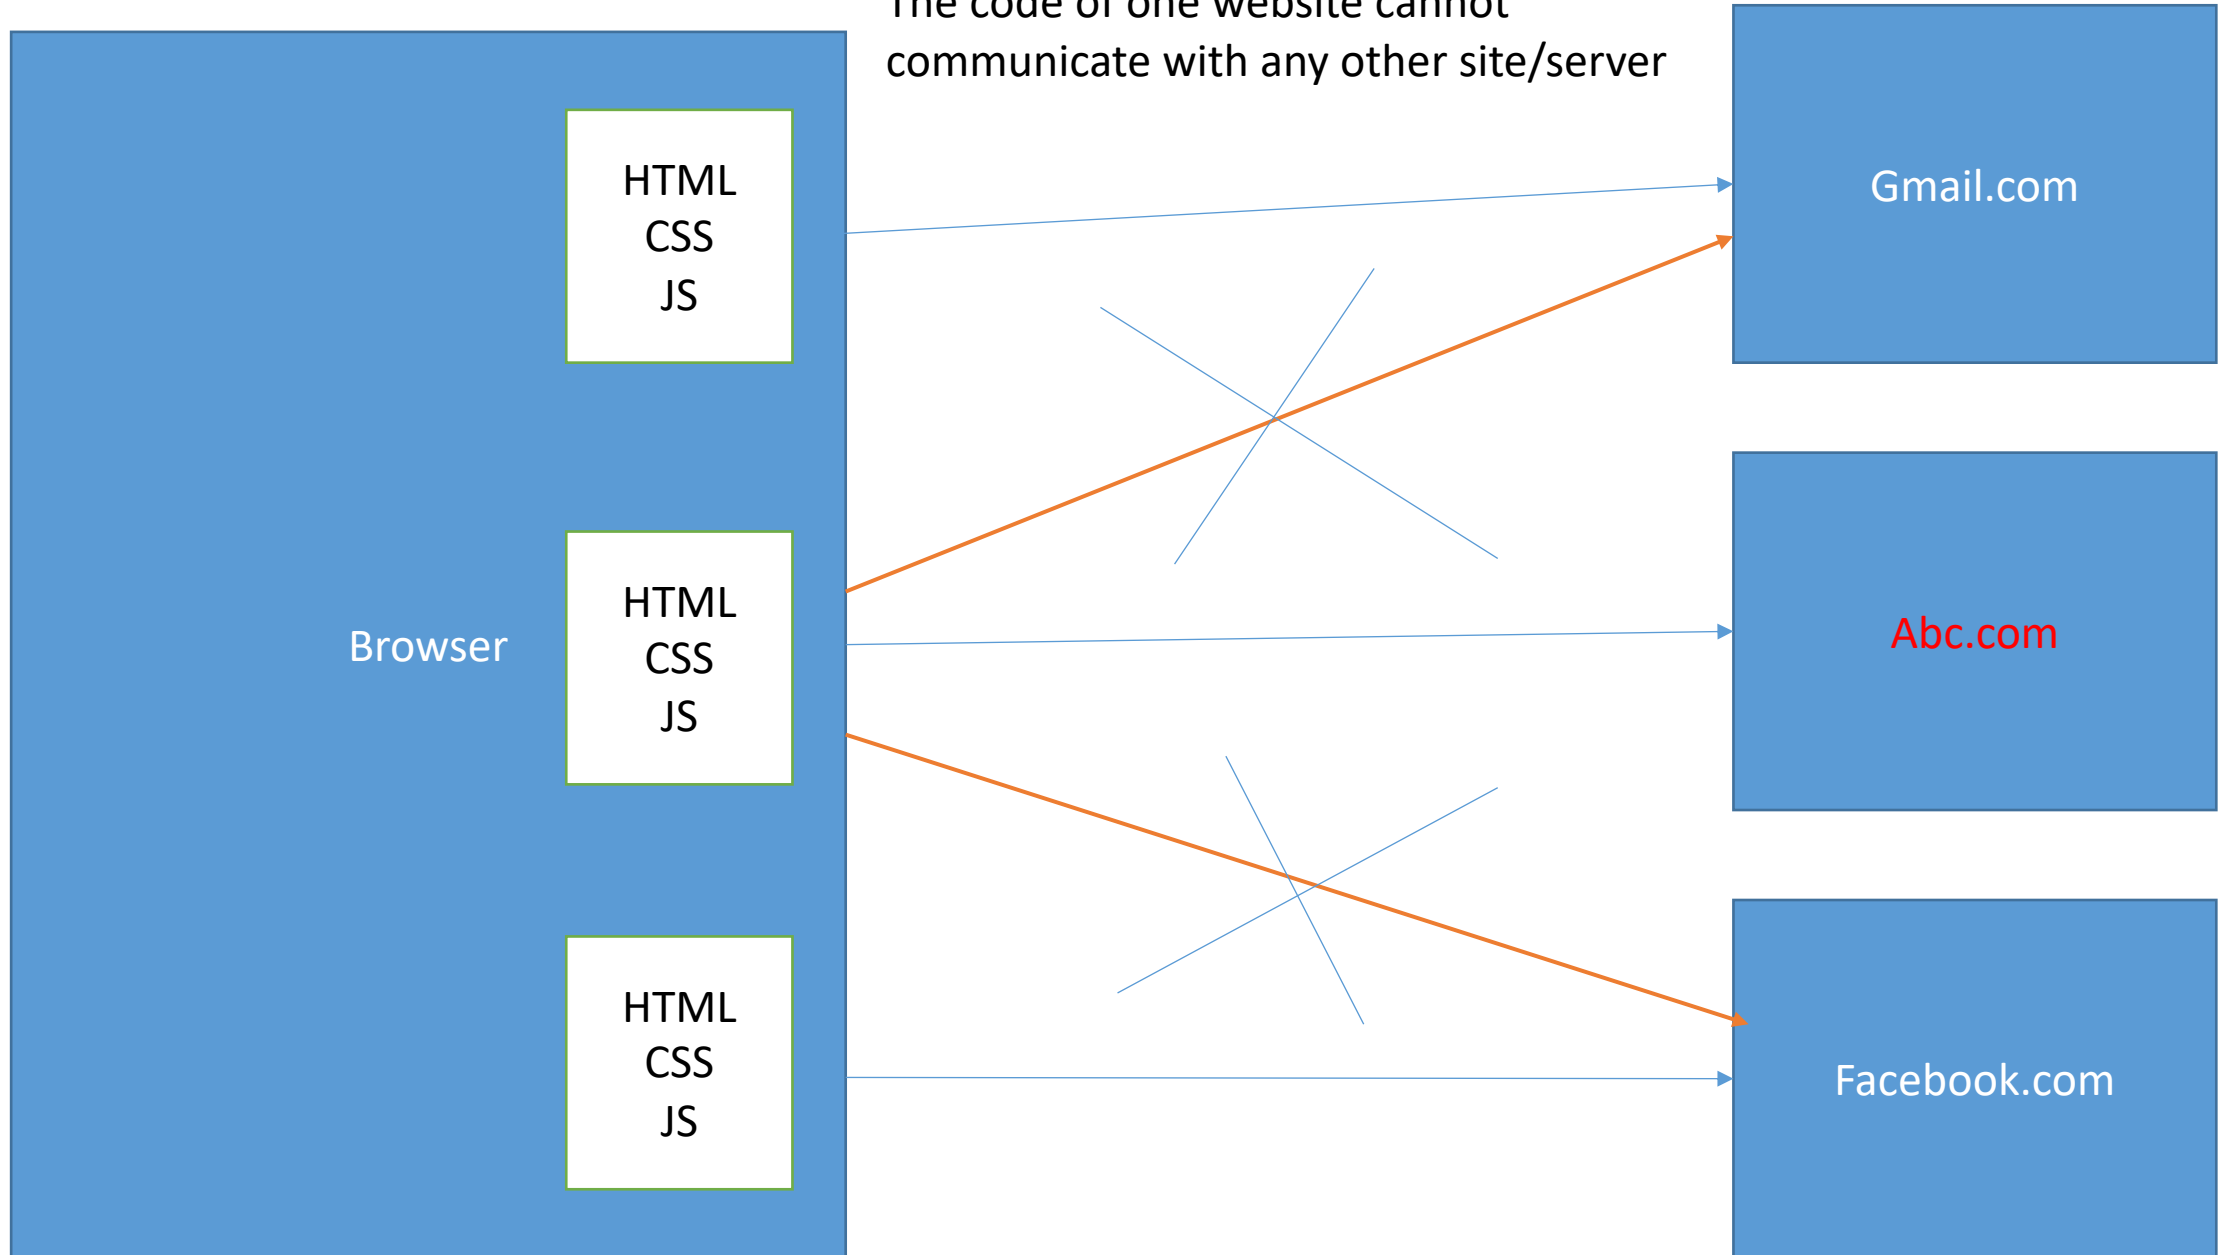

Airlines Project

XSS Attacks

SOP (Same Origin Policy)
The code of one website cannot
communicate with any other site/server

SOP (Same Origin Policy)
The code of one website cannot
communicate with any other site/server

But what if we want to achieve this for a
genuine reason

The solution it to use CORS
